

Assignment 6

using mongoose and express

create two collections.

- **user collection**
 - username
 - email
 - password
 - age
 - gender
 - phone
- **product collection**
 - name
 - description
 - price
 - userID
(must be related to the user collection)

Users APIs	Products APIs
1-sign up (email must be unique) 2-sign in 3-update user 4-delete user 5-search for user where his name contains with "X" and age less than Y, please note that X, Y are variables 6-search for users where their ages are between X and Y 7-get all users 8- get all user products	1- add product (make sure that user already exist) 2- delete product (product creator only) 3- update product (product owner only) 4- get all products 5- get all products with their owner's information (using populate) 6- sort products descending (By createdAt field)

Search Points:

**1- difference between
findOneAndDelete VS
findOneAndRemove**

**2- what is the http status
codes**
